

SHAHBAZ ABBASI

AI / Generative AI Developer | Python & Backend Developer | BS Computer Science Student

Karachi, Pakistan | 03292963594 | shahbazabbasi0333@gmail.com | github.com/devshahbazabbasi | LinkedIn

PROFILE

First-semester BS Computer Science student at SZABIST University focused on building practical AI and software systems. Hands-on experience developing Agentic RAG applications, AI assistants, chatbots, and backend APIs using Python, LLMs, LangChain, LangGraph, FastAPI, vector search, and modern developer tools. Seeking remote internships worldwide and onsite opportunities in South Karachi.

TECHNICAL SKILLS

- **Programming:** Python, C++, JavaScript, TypeScript, HTML, CSS
- **AI / LLM:** LLM applications, RAG, embeddings, vector search, AI agents, prompt engineering, agent orchestration
- **Frameworks / Backend:** LangChain, LangGraph, FastAPI, REST APIs, Streamlit
- **Data / Databases:** SQL, MySQL, PostgreSQL, vector databases
- **Tools:** Git, GitHub, Docker, VS Code, APIs
- **Core:** Backend development, chatbot development, data processing, software development

SELECTED PROJECTS

Agentic RAG Chatbot — Python • LangChain • LangGraph • LLMs • Vector Database

- Built an agentic Retrieval-Augmented Generation system that ingests documents, chunks content, creates embeddings, retrieves relevant context, and generates grounded answers.
- Implemented multi-step agent workflows and tool-oriented reasoning to improve how the system handles user requests.
- Designed the application around external knowledge retrieval rather than relying only on the LLM's internal knowledge.

CSS AI Assistant — Python • RAG • LLMs • Vector Search

- Built an AI assistant focused on the CSS syllabus and study material, enabling users to ask questions against a structured knowledge source.
- Implemented document ingestion, chunking, embeddings, retrieval, and LLM-based response generation.
- Applied RAG techniques to produce context-grounded answers from the supplied study material.

Hospital Management AI / API System — Python • FastAPI • SQLAlchemy • MySQL • Pydantic

- Developed a backend-oriented hospital management system with REST API workflows and database integration.
- Used FastAPI, SQLAlchemy ORM, Pydantic, and MySQL to structure application logic, validation, and persistent data.
- Focused on practical backend architecture and integration of software components.

FleetX — Fleet Management Platform — FastAPI • PostgreSQL • Flutter • React / Next.js

- Developing a multi-organization fleet management platform covering drivers, tankers, trips, expenses, invoices, payments, reports, notifications, and role-based access.
- Designed a multi-tenant architecture with organization-level data isolation and API authentication.
- Currently ongoing; planned as a full-stack MVP.

EDUCATION

BS Computer Science — SZABIST University, Karachi

First Semester | Expected Graduation: 2029

Current academic focus includes programming, computer science fundamentals, and software development. SZABIST's BS Computer Science program is a four-year undergraduate program. ■cite■turn0search0■

CAREER TARGET

Seeking: AI Engineering Internships, Generative AI Internships, Python Developer Internships, Backend Developer Internships, and Software Engineering Internships.

Availability: Remote roles worldwide; onsite roles in South Karachi.
